

CSE370

Database Systems Lab

Database Systems Lab

CSE370 • Summer 2026 • Lab Overview

What You'll Learn

SQL Fundamentals

Create, Read, Update, Delete & WHERE filtering

Aggregation & Subqueries

GROUP BY, HAVING, nested and correlated queries

Joins & Constraints

Combining tables through keys and relationships

Database Connectivity

Linking SQL to a live, working backend application

What to Expect

Group Project

Teams of 2-3 building a Management System App

Two Lab Quizzes

SQL-focused assessments in Week 4 and Week 7

Milestone Reviews

ER diagrams, schema design and feature evaluations

Final Demo & Viva

Individual evaluation for every member in Week 10

Our focus is SQL. The backend programming language used to connect your project (PHP, Django, JavaScript, or any other) is not taught in lab. It's self-learning, so choose what works best for your team.

Mark Distribution

CSE370 • Database Systems Lab • 40 Marks

Component	Marks	Details	Type
Assignment	5	Average of all 3 assignments	Individual
Lab Quiz	15	Average of both 2 quizzes	Individual
Project Report	5	<i>More details will be discussed later on...</i>	group
Group Work	3	Group contribution & cohesion + report format	group
Project Simulation	6	3 features per student, 2 marks per feature	Individual
Project Viva	6	Viva on features focus: SQL queries and how data is stored, fetched, and modified	Individual
Total	40	Converted to 30 and sent to Theory Faculty	Individual

Project Requirements

CSE370 • Database Systems Lab •

Must Haves

Project

Build a data management website (e.g., Student Management System, Library System)

Backend

Use raw SQL queries in Python/PHP/Javascript or any language to handle all database operations

Frontend

Use HTML/CSS/JS to display data and collect user input

Pre-Condition

All database interactions must use raw SQL (no ORM, no API frameworks)
